The Theme of the Workshop:

Bootstrap, the world's most popular framework for building responsive, mobile-firs t sites. Bootstrap is a free and open source front end development framework for the creation of websites and Web apps.Bootstrap is a good framework to prototype with in a short period of time. Its easy to learn, responsive and a lot of web developers use it.The Bootstrap framework is built on HTML, CSS, and Java Script (JS) to facilitate the development of responsive, mobile-first sites and apps. It's open-source & free to use, yet features numerous HTML and CSS templates for UI interface elements such as buttons & forms. Bootstrap also supports Java Script extensions. CSS is more complex than Bootstrap because there is no pre-defined class and design.

Bootstrap is easy to understand and it has much pre-design class. In CSS, we have to write code from scratch.In Bootstrap, we can add pre-defined class into the code without writing code.

The present workshop aims to develop effective and responsive website development by using Bootstarp rather than using traditional bulky coding .This will help and allow the participants to Develop responsive attractive and efficient development of website in less tme and in a easy and smart way.
